Pokuta za koňské maso v kuličkách IKEA? Půl milionu korun

ČTK, mil

25. 4. 2013 17:41

Zpravodajství

0

- Veterinární správa udělila pokutu půl milionu za koňské maso v kuličkách IKEA. Švédský nábytkářský řetězec se kvůli tomu odvolal. Naopak Tesco, které za koninu dostalo za koninu pokutu 650 tisíc korun, se odvolávat nebude.

Meat Substitution

Motivation : \$\$\$

- Addition of meat from undeclared species to a specific meat product in order to lower production cost and increase profitability

Cost per kg: Horse meat << Beef meat

An international issue

- It is economic fraud
- It represents health issues due to specific dietary restrictions
- It is an ethical problem
- It is also an important cultural and religious issues

How testing is done?

- Two-dimensional polyacrylamide gel electrophoresis and western-blot analysis
- Qualitative Real-Time PCR
- Enzyme-linked immunosorbent assay (ELISA)

Challenges

- These methods are mostly qualitative
- Molecular information obtained is limited
- Data can't be revisited post-acquisition for data mining
- They are not generic approaches and need to be heavily customized

What About Mass Spectrometry Options

High Resolution Accurate Mass

- Can perform the same level of quantitation as MS/MS
- Selectivity obtained by accurate mass measurement (only m/z needed)
- Less false positives and negatives
- No need to setup instrument (SRM) before analysis
- Unlimited number of compounds in a run – perfect for screening
- Automated data processing

Q Exactive™ MS - a 3D View

Why Bottom-up Proteomics Workflow Is An Interesting Option To Develop An MS Based Assay?

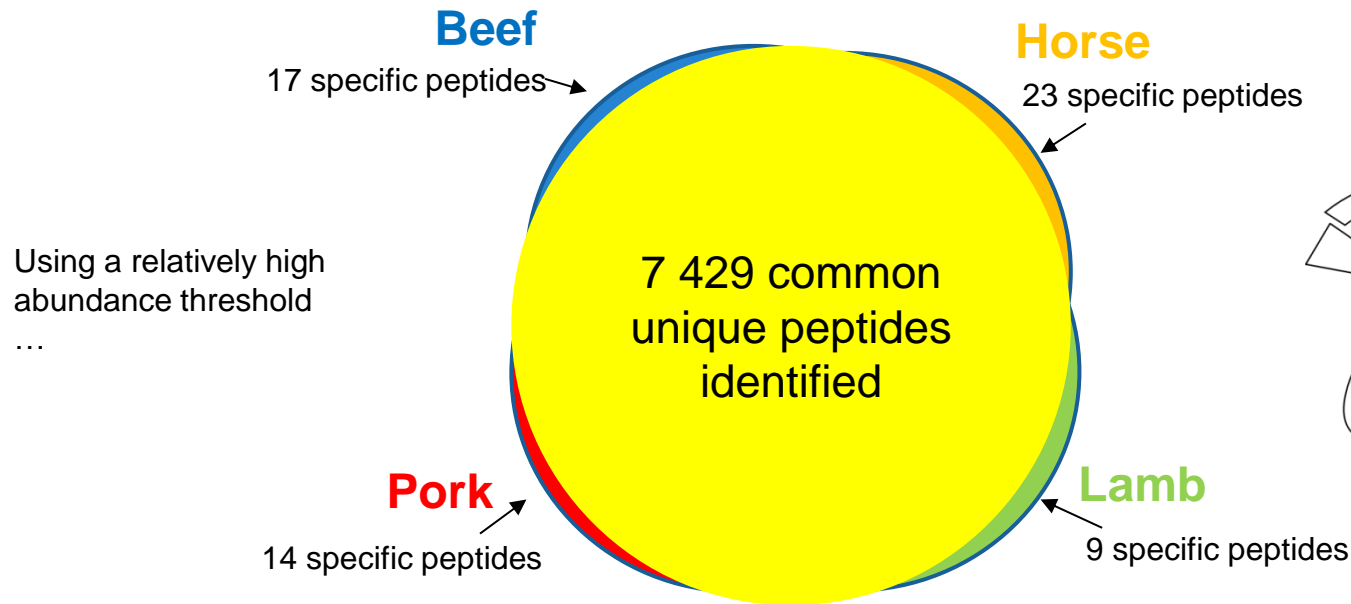

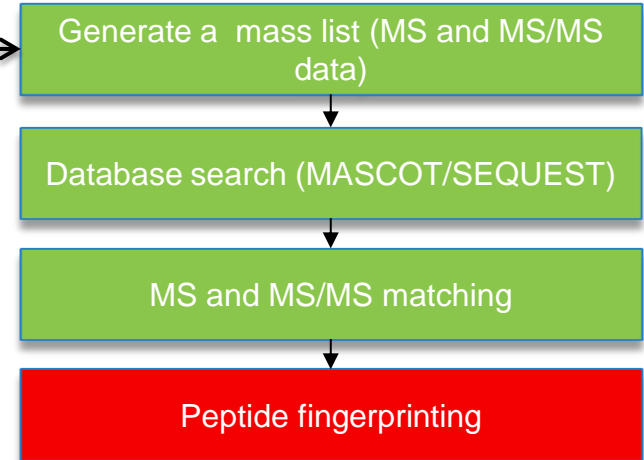

All life forms are related by common ancestry and descent. The construction of phylogenies provides explanations of the diversity seen in the natural world.

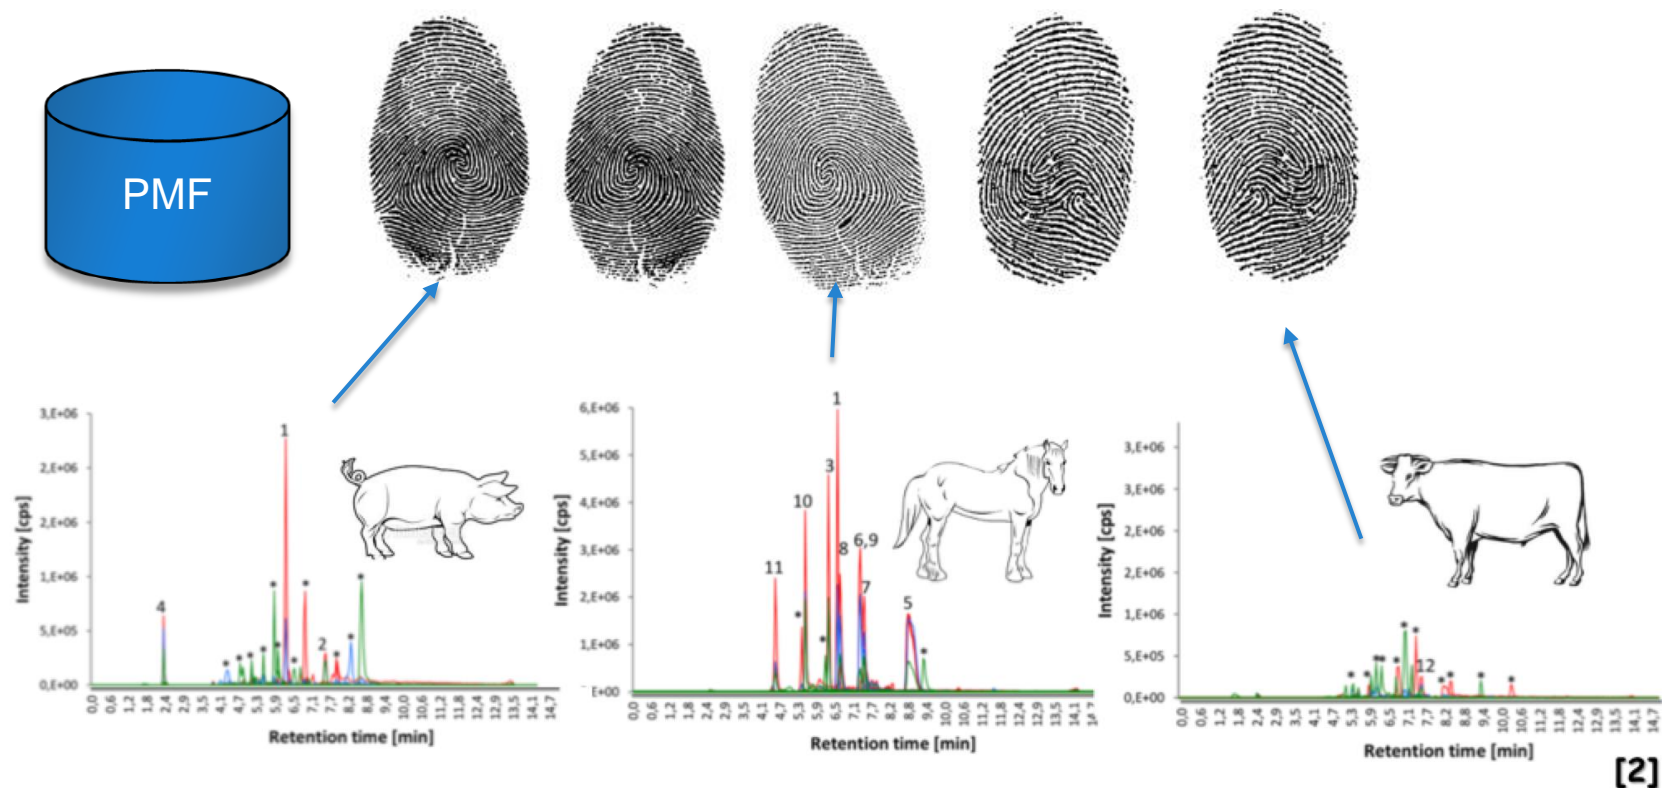

Today, phylogenies are usually constructed using **DNA sequence data**.

Relationship between genes and species is central for meat speciation

Traditional Peptide Fingerprinting Approach Using MS

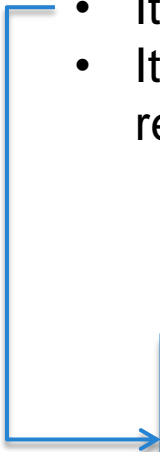

Peptide Mass Fingerprinting

marker	species	protein	biomarker peptide sequence	marker	species	protein	biomarker peptide sequence
1	pig/horse	troponin T/unknown	YDIINLR	7	horse	pyruvate kinase	IYVDDGLISLQVK
2	pig	myosin-4	TLAFLFAER	8	horse	hemoglobin	FLSSVSTVLTSK
3	horse	myosin-2	EFEIGNLQSK	9	horse	myoglobin	HGTVVLTALGGILK
4	pig	myosin-1 and myosin-4	SALAHAVQSSR	10	horse	myoglobin	VEADIAGHGQEVLR
5	horse	myoglobin	YLEFISDAIIHVLHSK	11	horse	myosin-1	LVNDLTGQR
6	horse	myosin-1 and myosin-2	VVETMQTMLDAEIR	12	cattle	myosin-1	TLALLFSGPASGEAEGPK
*	Unspecific signals						

What Are The Main Limitations Of This Analytical Approach?

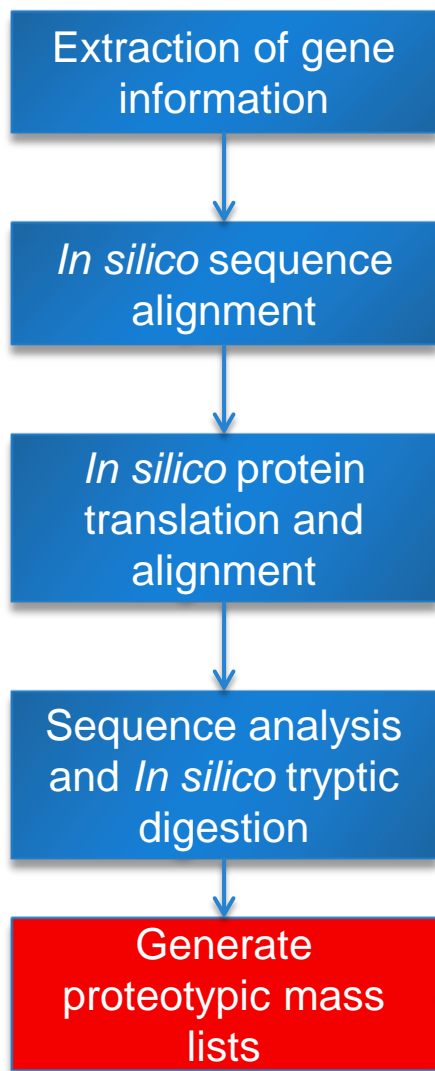

- It relies heavily on the quality of the MS and MS/MS data
- It strongly relies on bioinformatics and parameterizations
- It requires highly skilled scientists to obtain comprehensive results

Is this really appropriate for implementation in a routine food analysis laboratory ?

Can we propose alternative strategies ?

Targeted Bioinformatics Analysis Example: Myoglobin

Myoglobin is the primary oxygen-carrying protein of muscle tissues
It is a highly abundant protein

Proteotypic peptides can be identified (120-134)

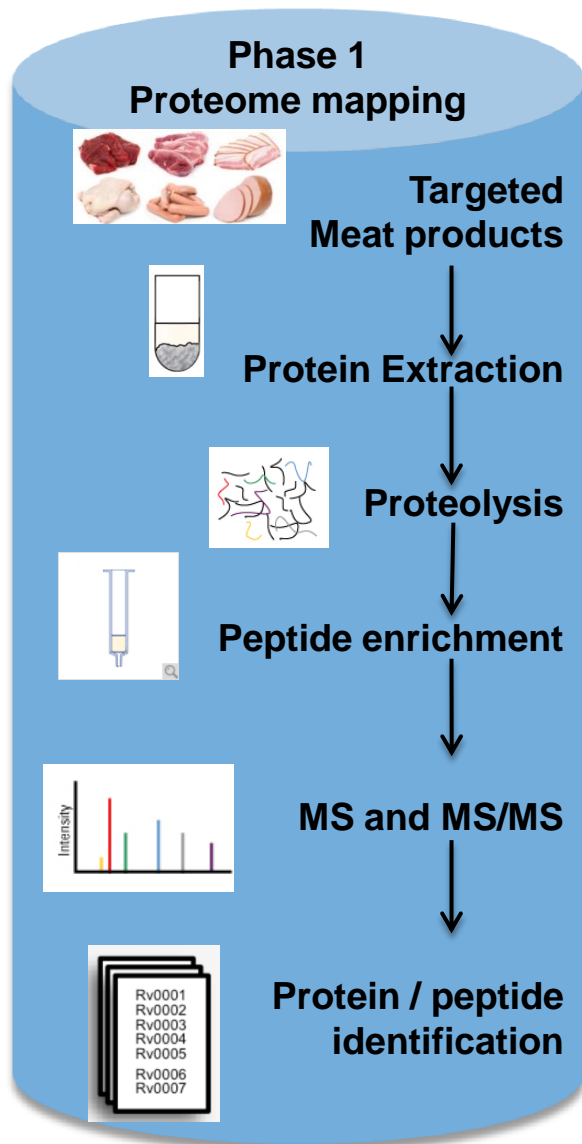

120 ↓ 134 ↓

Beef YLEFISDA IIVLHAKHP SDFGADAQA AMSKALELFR
 Horse YLEFISDA IIVLHAKHP GDFGADAQA MTKALELFR
 Pork YLEFISEA IIQVLQSKHP GDFGADAQA AMSKALELFR
 Lamb YLEFISDA IIVLHAKHP SDFGADAQA AMSKALELFR

	Proteotypic peptides	Mass (m/z)
Beef	HPSDFGADAQAAMSK	x_1
Horse	HPGDFGADAQAAMTK	x_2
Pork	HPGDFGADAQAAMSK	x_3
Lamb	HPSDFGADAQAAMSK	x_4

How Bottom-up Proteomics Can Be Used For Meat Speciation

Bottom-up Proteomics Sample Preparation

1. Meat sample mixed with water (1:5) is homogenized and the mixture is sonicated
2. Proteins in the suspension are precipitated with acetone (1:1)
3. Acetone is discarded and the generated protein pellet is dried to remove all traces of acetone.
4. Protein pellets are dissolved in ammonium bicarbonate (pH 8.5).
5. Proteins are denatured by heating at 120°C
6. Reduced with Dithiothreitol (DTT) and alkylated with Iodoacetamide IAA
7. Proteomic grade **trypsin** is added and the reaction is performed at 40°C for 24h.
Trypsin cleavage occurs after basic amino acids : **Lys (K) & Arg (R)**

Each Targeted Peptides Can Be Detected And Extracted From Tics

Species	Tryptic peptide sequence MB (120-134)	Theoretical mass (z=2)	Observed mass (z=2)	Mass accuracy (ppm)
Beef	HPSDFGADAQAAMSK	766.8435	766.8436	0.13
Horse	HPGDFGADAQGAMTK	751.8383	751.8378	-0.67
Pork	HPGDFGADAQGAMSK	744.8304	744.8314	1.34
Lamb	HPSDFGADAQGAMSK	759.8357	759.8363	0.79

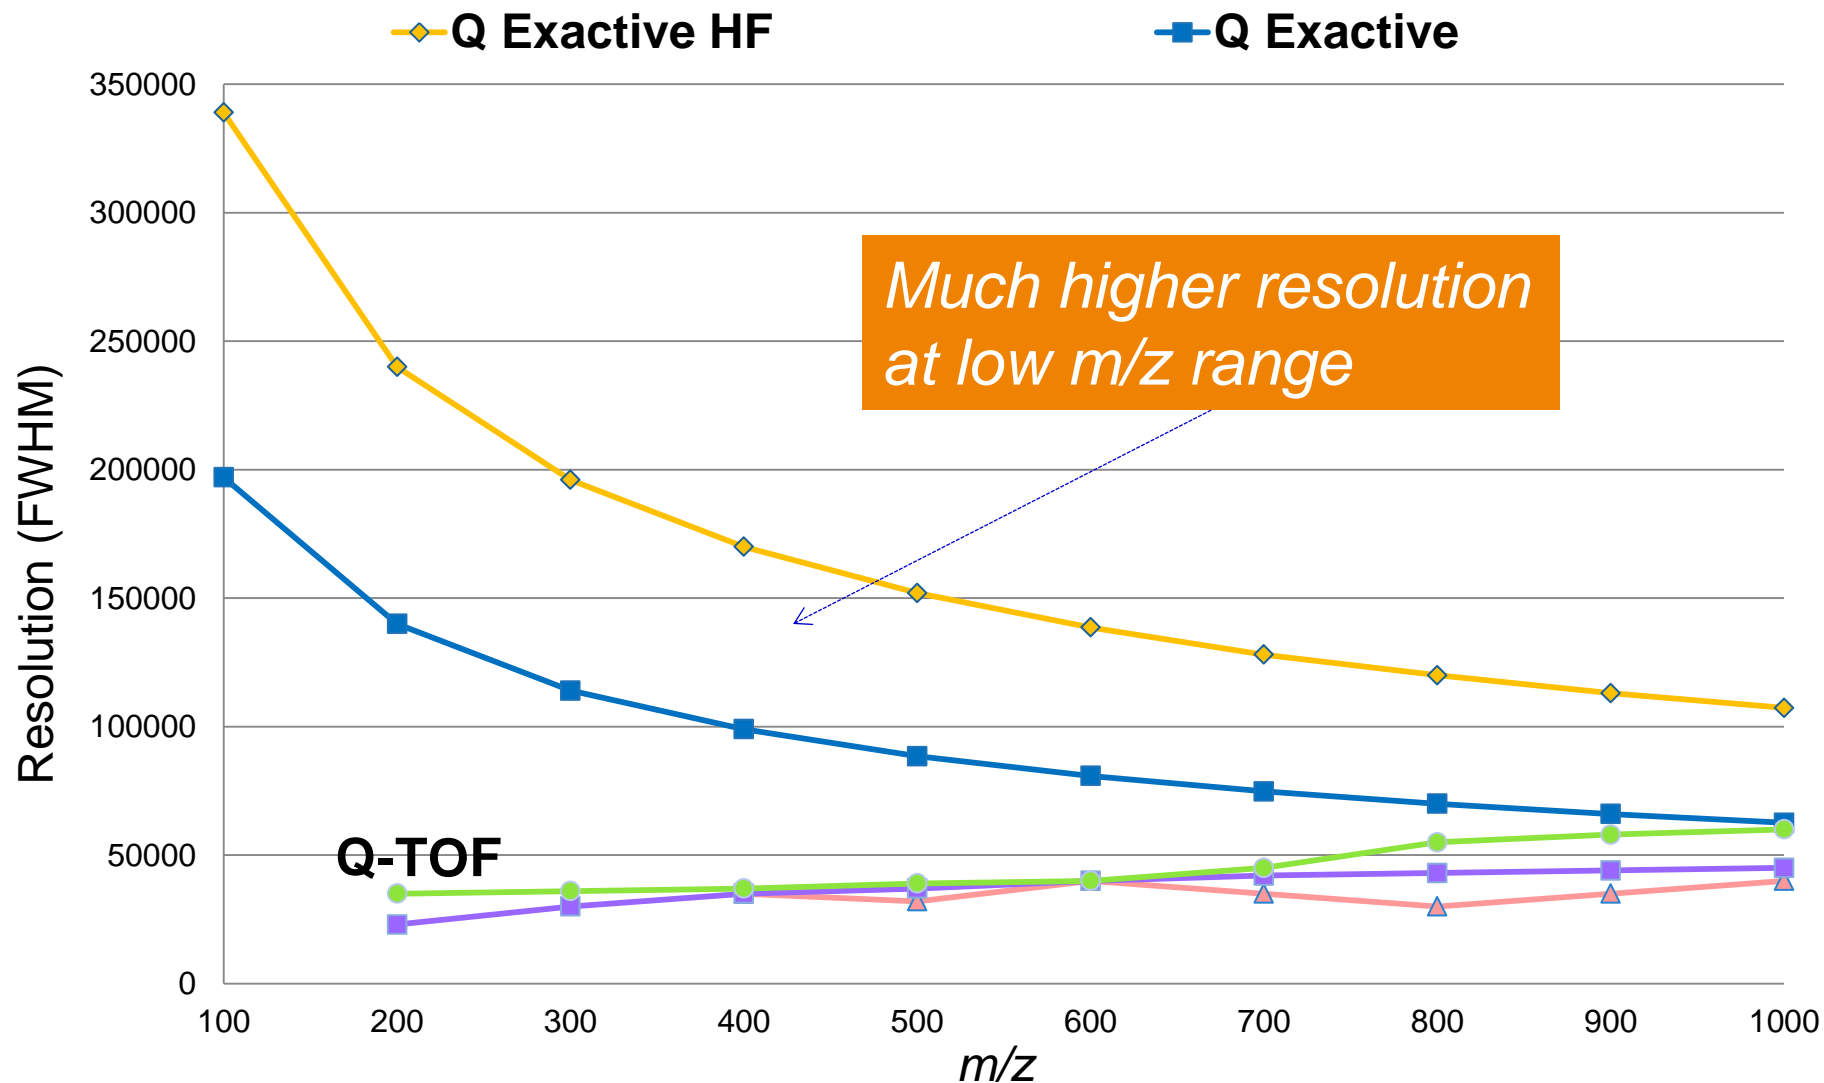

Very complex TIC's
Over 7000s of unique
peptides can be found.

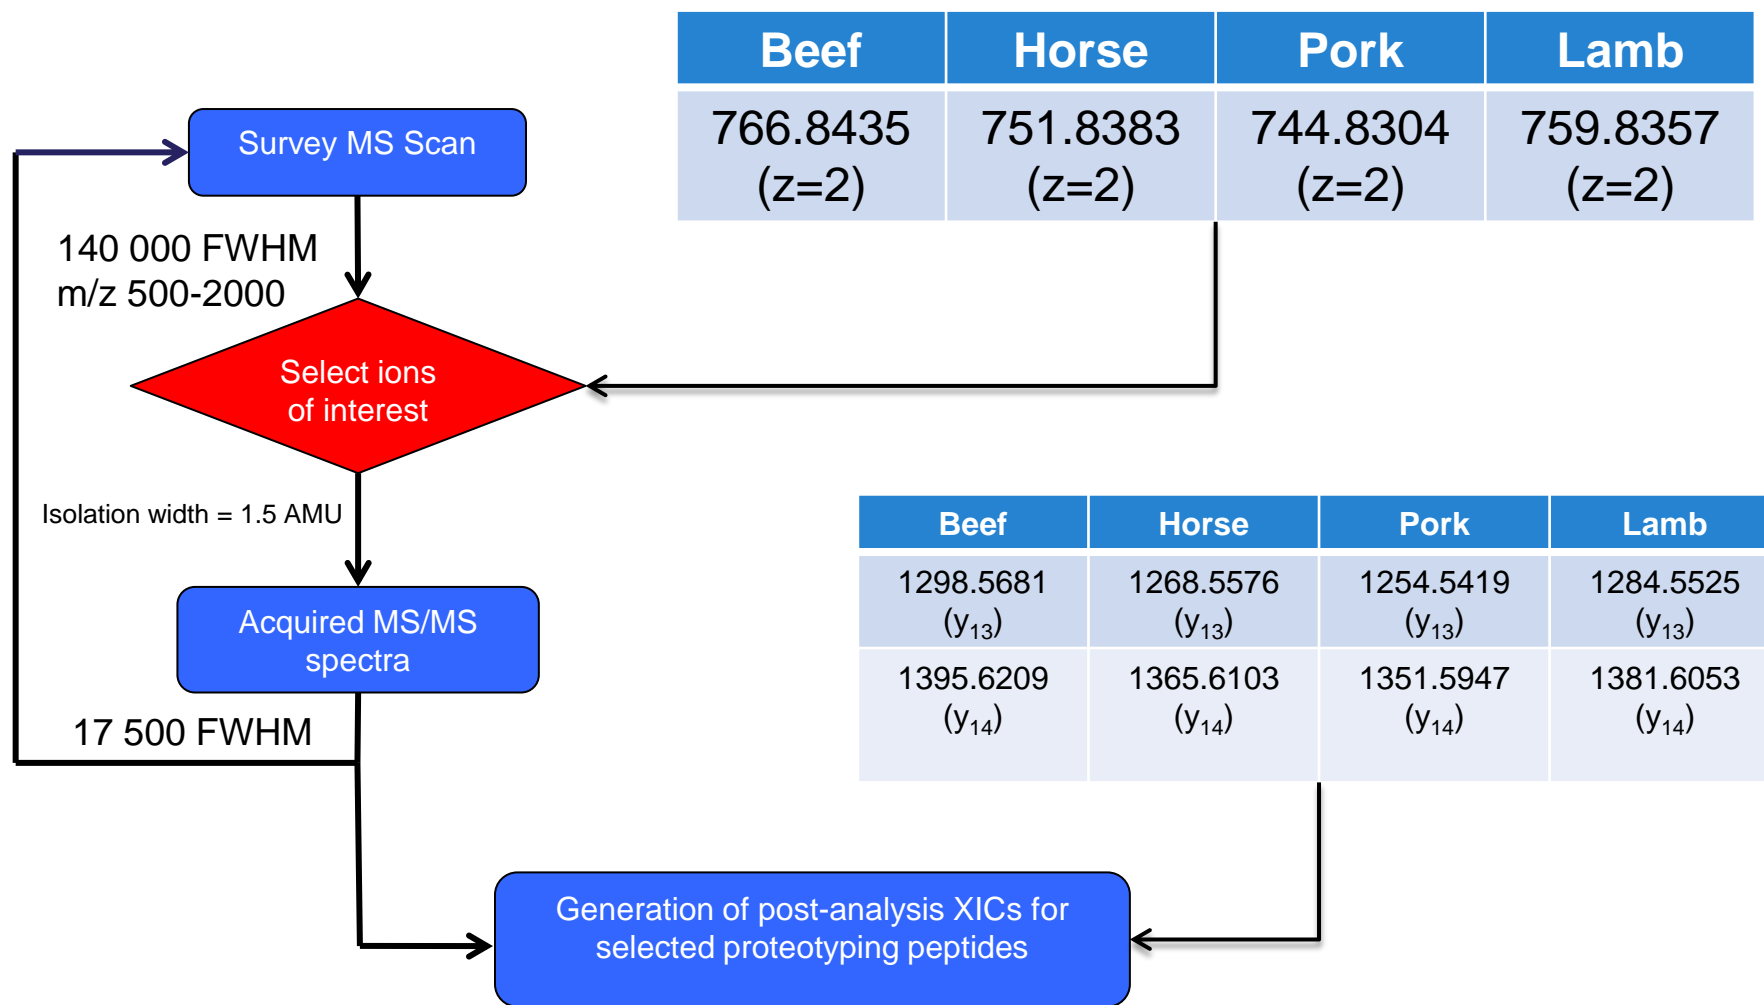

Need for very high
resolution data (>100 000).

Resolution vs. m/z

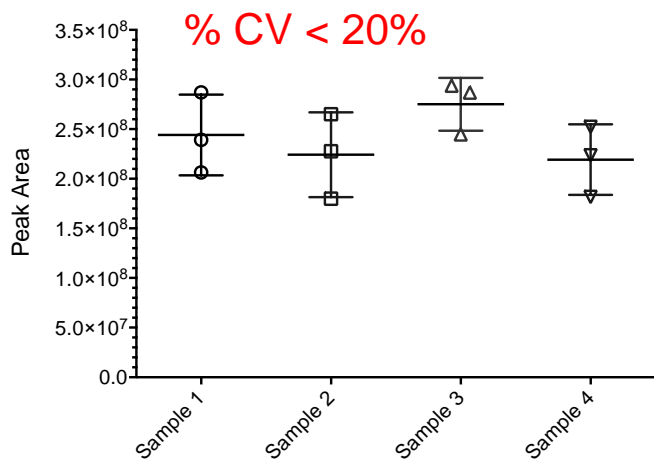

Data Dependent MS/MS Used For Targeted Work

Extracted ion chromatogram at y_{14} or $y_{13} \pm 5$ ppm

Assessment Of The Apparent Intra- And Inter Method Reproducibility

Beef (Myoglobin peptide 120-134)

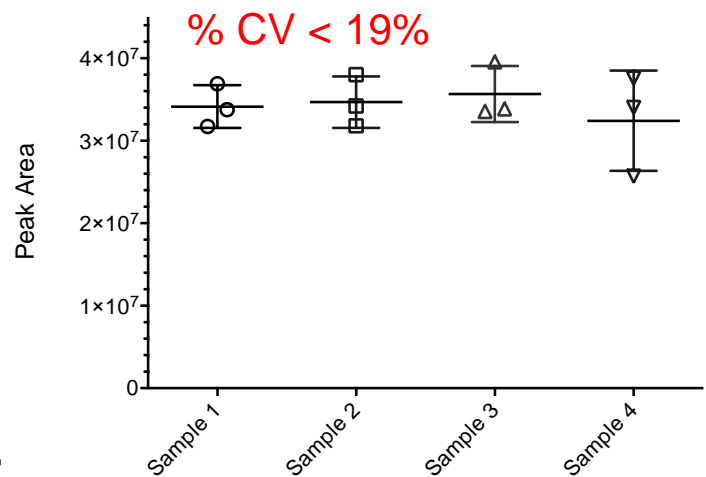

Horse (Myoglobin peptide 120-134)

Pork (Myoglobin peptide 120-134)

Lamb (Myoglobin peptide 120-134)

Tryptic Digestion Optimization

After 1h, peptides can be detected.
At 4h, we observed 30-40% of the maximum abundance.

Routine Practice

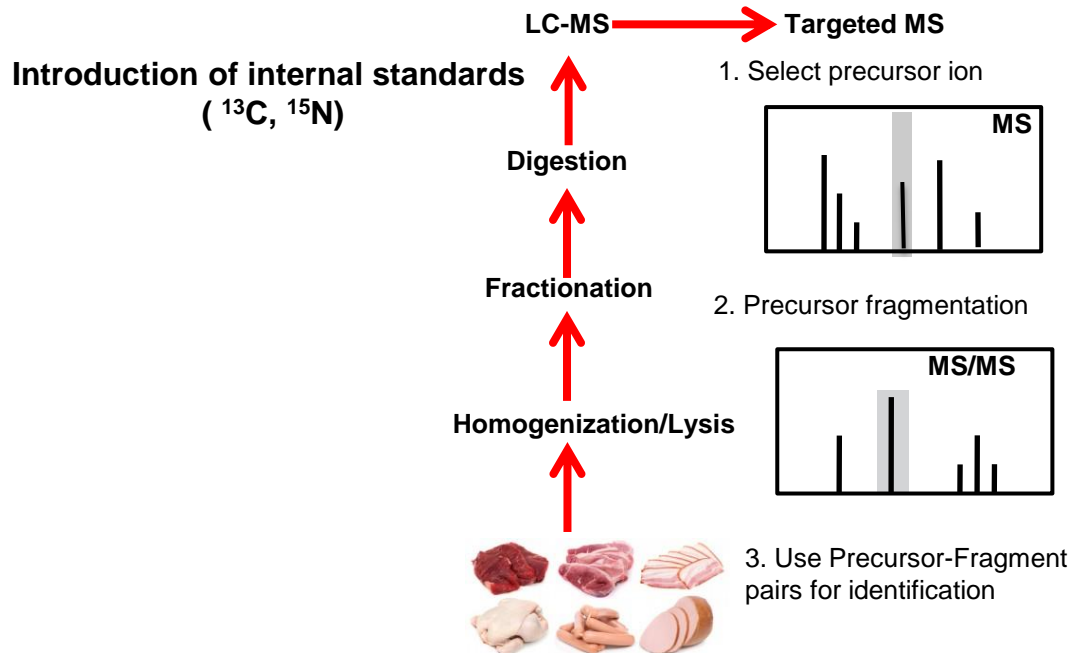

Protein

Proteotypic peptides

MS/MS spectra

We can use labeled peptides as internal standards !

Quality Control !

This is a must for methods to be used for routine analysis in multiple sites

Conclusions

- Targeted bottom-up proteomics approach can be applied for meat species detection down to 0.1% w/w
- Quick and simple workflow for any laboratory
- High resolving power (140,000 FWHM) was needed to obtain sufficient selectivity
- Isotopically labelled peptides recommended for routine control
- Tested in routine – applying HPLC-Q Exactive

Special Thank you to **dr. Francis Beaudry** and **dr. Alberto Ruiz** from the Université de Montréal, Canada for providing the data

Webinar: Thermo Fisher Scientific Meat Adulteration Resource

Webinar

The webinar thumbnail features a speaker, Francis Beaudry, Ph.D., on the left. The main content area displays a complex proteogenomic strategy diagram. It includes a sequence alignment of DNA/RNA, a list of specific pork myoglobin tryptic peptides: 1 VEATVWGNQGEYERLK 18 , 1 QKPELLEK 13 , 1 NSDEMKALDYLK 18 , 1 QKHEASLPLAQSHATE 17 , and 1 WYLFESAMQVLSK 17 . A magnifying glass icon highlights the text 'Specific MS and MS/MS data'. The ThermoFisher Scientific logo is visible in the bottom left corner of the thumbnail. The video player interface at the bottom shows a play button, a progress bar at 0:00 / 44:28, and icons for share, volume, and full screen.

Meat Species Determination and Adulteration Detection using High-Resolution Mass Spectrometry and Proteogenomic Strategy

A new strategy is presented for identifying meat adulteration and authenticity by merging bioinformatics and a targeted bottom-up proteomic approach using LC coupled to Orbitrap HRAM mass spectrometry.

Video

The video thumbnail shows a laboratory setting with a large piece of scientific equipment, likely a mass spectrometer, and a smaller instrument. A large play button icon is centered over the image. The ThermoFisher Scientific logo is visible in the bottom right corner of the thumbnail. The video player interface at the bottom shows a play button, a progress bar at 0:00 / 13:25, and icons for share, volume, and full screen.

Sample Preparation for Meat Species Determination and Adulteration using High-Resolution Mass Spectrometry

Learn how to carry out each of the sample preparation steps required for preparing meat samples prior to analysis by LC coupled to Orbitrap HRAM MS.
