Rapid separation systems
high-end performance

Speed • Resolution • Versatility
Rapid separation LC accelerate your analysis

The Thermo Scientific Dionex UltiMate 3000 Rapid Separation LC (RSLC) systems accelerate HPLC for unrivaled performance and flexibility. Precision-engineered instrumentation, advanced data processing, and highly optimized chemistries meet all chromatographic performance challenges. With its binary, quaternary, and dual-gradient pumps, these industry-leading systems offer versatility covering the maximum range of HPLC, including conventional and ultrafast LC.

- Up to 50 times faster than conventional LC
- High resolution for maximum peak capacity
- Instant results with Thermo Scientific Dionex Chromeleon software
- Universal method transfer and speed-up
- Thermo Scientific Dionex Viper fingertight fitting system
- Dual-gradient pumps and switching valve options for advanced chromatographic techniques

Together, these characteristics make RSLC the only available choice for highest resolution to maximum speed LC.

With their extensive flow-pressure footprint, RS systems fully meet your chromatographic goals. Simply work with your column of choice and in the appropriate zone for your application.
The Right Combination of Components and Data Management

The UltiMate 3000 RS systems deliver superior performance, excelling at pressures of 100 MPa (15,000 psi) and flow rates up to 8 mL/min. Detector and autosampler technologies, powerful software, and small particle columns contribute to RSLC capabilities.

A Complete Package for Performance Leadership

Engineered to the highest level of performance, the UltiMate 3000 RS systems deliver the key flow rate and pressure capabilities to meet all LC challenges. With its extensive flow-pressure footprint, short sampler cycle times, high column temperatures, ultrafast data collection and processing, and high-resolution columns, the system maximizes LC flexibility. This combination of features delivers optimal separations at ultrahigh speed while maintaining good resolution.

According to the van Deemter curve, smaller particle sizes give low plate heights and thus higher separation efficiency, ideal for fast separations on short columns.

Using columns with small particle sizes, you can accelerate LC at higher flow rates and achieve almost identical resolution to conventional LC at lower flow rates. For example, with 2.2 µm particles you can double the speed of your method and still have 96% of your original resolution.
High Flow and Efficiency
Ultimate 3000 RS systems are designed to deliver robust operation at high flow rates and high pressure.

- Backpressures up to 100 MPa (15,000 psi)
- Flow rates up to 8 mL/min
- Oven temperatures up to 110 °C
- Data collection rates up to 200 Hz

RSLC Provides Unrivaled Speed: 10 Peaks in 10 Seconds

Separation of uracil and nine alkylphenones in 10 s, with a full 100 Hz DAD spectral scan. The run was performed using a flow rate of 3.7 mL/min, a backpressure of 730 bar, an oven temperature of 100 °C, and a 30 × 2.1 mm C18 column with 1.8 µm particle size.

Analysis of seven key compounds in soft drinks in less than 40 s on the Thermo Scientific Acclaim RSLC 2.2 µm column.
High-resolution RSLC
boost speed and productivity

Resolution and Speed: Meeting the Challenge for Superior LC
Achieving the highest resolution in the fastest run times takes more than a great LC system. High resolution also requires low extracolumn volumes and long columns with small particle sizes. Achieve high-resolution UHPLC by improving efficiency and reducing band broadening. Small particle sizes significantly increase efficiency; lower extracolumn volumes ensure that this increase is not lost again due to band broadening.

Reducing particle size increases separation of compounds, provides optimal peak resolution, and increases peak height for improved sensitivity.
Small Particle Size Columns Provide the Highest Efficiency

To optimize your fast separations, the UltiMate 3000 RS systems deliver the lowest extracolumn volumes and highest efficiency with small particle size columns.

- Unique, easily scalable Thermo Scientific SpinFlow mixer technology
- Comprehensive mixer portfolio from 35 µL to 1550 µL for a wide application range
- Revolutionary Viper fingertight fitting system for performance without compromise
- Dedicated range of 1, 2.1, and 3 mm i.d. high-resolution columns
- Compatible with all commercially available stationary phases

**Beyond UHPLC unique solutions**

**UHPLC Reaches a New Level of Flexibility and Performance**

UltiMate 3000 x2 Dual RS systems offer laboratories unprecedented sample throughput and easy automation of advanced procedures. Seamless integration of UHPLC with x2 Dual RSLC technology and powerful Chromeleon software brings laboratories new possibilities:

- Doubled sample throughput with parallel and tandem LC
- Increased use time by automatically switching between applications
- Highest selectivity and resolution with multidimensional LC

Automated application switching increases productivity by using nights and weekends, when the instrument would otherwise sit idle.
Connect to the Future

The revolutionary Viper fitting system does away with all problems experienced with conventional fitting systems. It provides a perfect fit each time it is used and ensures superior chromatographic performance.

- Straightforward, zero-dead-volume UHPLC fingertight fittings
- Compatible with virtually every type of valve and column hardware
- Tool-free, Viper-based kits for advanced LC solutions

All RSLC tubing kits and UHPLC+ solutions feature the unique Viper design, making the best UHPLC system even easier to use.

Slipping capillaries cause deteriorated peak shapes (left). Viper capillaries provide robust performance at UHPLC pressures (right).

The Viper connector tightens at the tip of the capillary, and does not use ferrules that may cause incompatibility with the opposite holder.
Instant results
seamless integration

Chromeleon Software Ensures that RSLC is Ultrafast
All UHPLC+ systems and solutions are powered by Chromeleon Chromatography Data System software that produces results instantly. The following features ensure increased productivity and a laboratory focus on results, not just data.

- Data processing times reduced by as much as 90%
- Instant calculation of results
- Integrated method transfer wizard for quick and easy conversion of conventional LC methods to RSLC methods
- Dedicated reports for method validation, related substances, EPA statistics, dissolution testing, content uniformity, and more

To use the calculator, simply enter your old method parameters and your new column details. The calculator immediately translates your method without the need for time-consuming lab work associated with method development. In addition, it automatically calculates how much time and solvent your new method will save.
USLC Data Processing

UHPLC requires ultrafast data handling. Chromeleon software delivers seamless data handling that ensures instant results.

Using a fast dissolution method with a total run time of 18 s allows the analysis of all dissolution samples in less than 30 min. After that, the dynamic processing tools of the Chromeleon software instantly calculate the dissolution profile and assess the results against specifications.

From sample to results in fewer clicks

Using Chromeleon software, a 40 page validation report (based on ICH guidelines) is created in only 1 min.
**UHPLC method development**

**ultrafast and automated**

**Dedicated UHPLC Hardware Setup and the Intelligent Simplicity of Chromeleon Software**

RSLC facilitates the acceleration of your existing methods and also speeds the development of new methods. The RSLC-based Automated Method Scouting solution enables you to screen a defined set of UHPLC columns combined with a set of buffers, solvents, and temperatures in the shortest possible time.

- Optimized hardware design with integrated multi-position buffer elector and ultrahigh-pressure, multi-position column selector valves
- Intuitive instrument control and method setup with Chromeleon software
- Powerful queries and automated processing to find all methods that meet user criteria
- Visualization tools make the best separations obvious at a glance

The bubble chart makes finding the most promising separations easy. The lower the bubble on the y-axis, the faster the separation. The size of the bubble represents the resolution between the critical peak pairs.
Method Scouting Workflow
RSLC-based Automated Method Scouting enables screening with ultrafast generic gradient methods, easily set up in the Chromeleon software. Execution, evaluation, and validation are fully automated.

UHPLC for all
exceptional application range

A Powerful Combination of Capabilities and Specifications
Flexible and reliable ultrafast LC has three main requirements: the ability to run ultrafast and conventional LC on one system; superior robustness to maximize productivity; and full compatibility with your detector of choice for optimal front-end separations. The data below demonstrate the UltiMate 3000 RS systems' flexibility, handling both conventional LC and UHPLC with excellent performance.

Reliability—a Must for Liquid Chromatography
Capable of running both conventional and ultrafast LC methods, the UltiMate 3000 RS systems deliver unrivaled reliability. RSLC ensures reproducibility and uptime for injections day after day, week after week, and year after year.

The chromatograms show a UHPLC method (above) and a conventional LC method (right), demonstrating industry-leading performance in both operational modes.
Maximum Flexibility
- Run conventional LC and UHPLC methods on the same instrument
- Take advantage of the powerful alternative quaternary and dual-gradient RS pumps for highest flexibility in analysis and method development at the UHPLC level
- Industry-leading range of detectors

Maximum Reliability
- Precision engineered instruments provide robust operation and maximum uptime, even with advanced ×2 Dual configurations
- Patented injection valve design ensures long-term operation at 100 MPa and up to 500 µL injection volume
- Easy-to-use diagnostic tests allow immediate assessment of instrument performance

Easy-to-use tests provide instant assessment of instrument performance.

LC and UHPLC in one system without compromises

UHPLC analysis of ink using ternary gradient elution. The UltiMate 3000 Quaternary RS systems can easily accelerate non-binary gradient methods.
