## Main Components of Dual EGC - For Analytical & Cap Formats

Dual EGCs – MSA& KOH

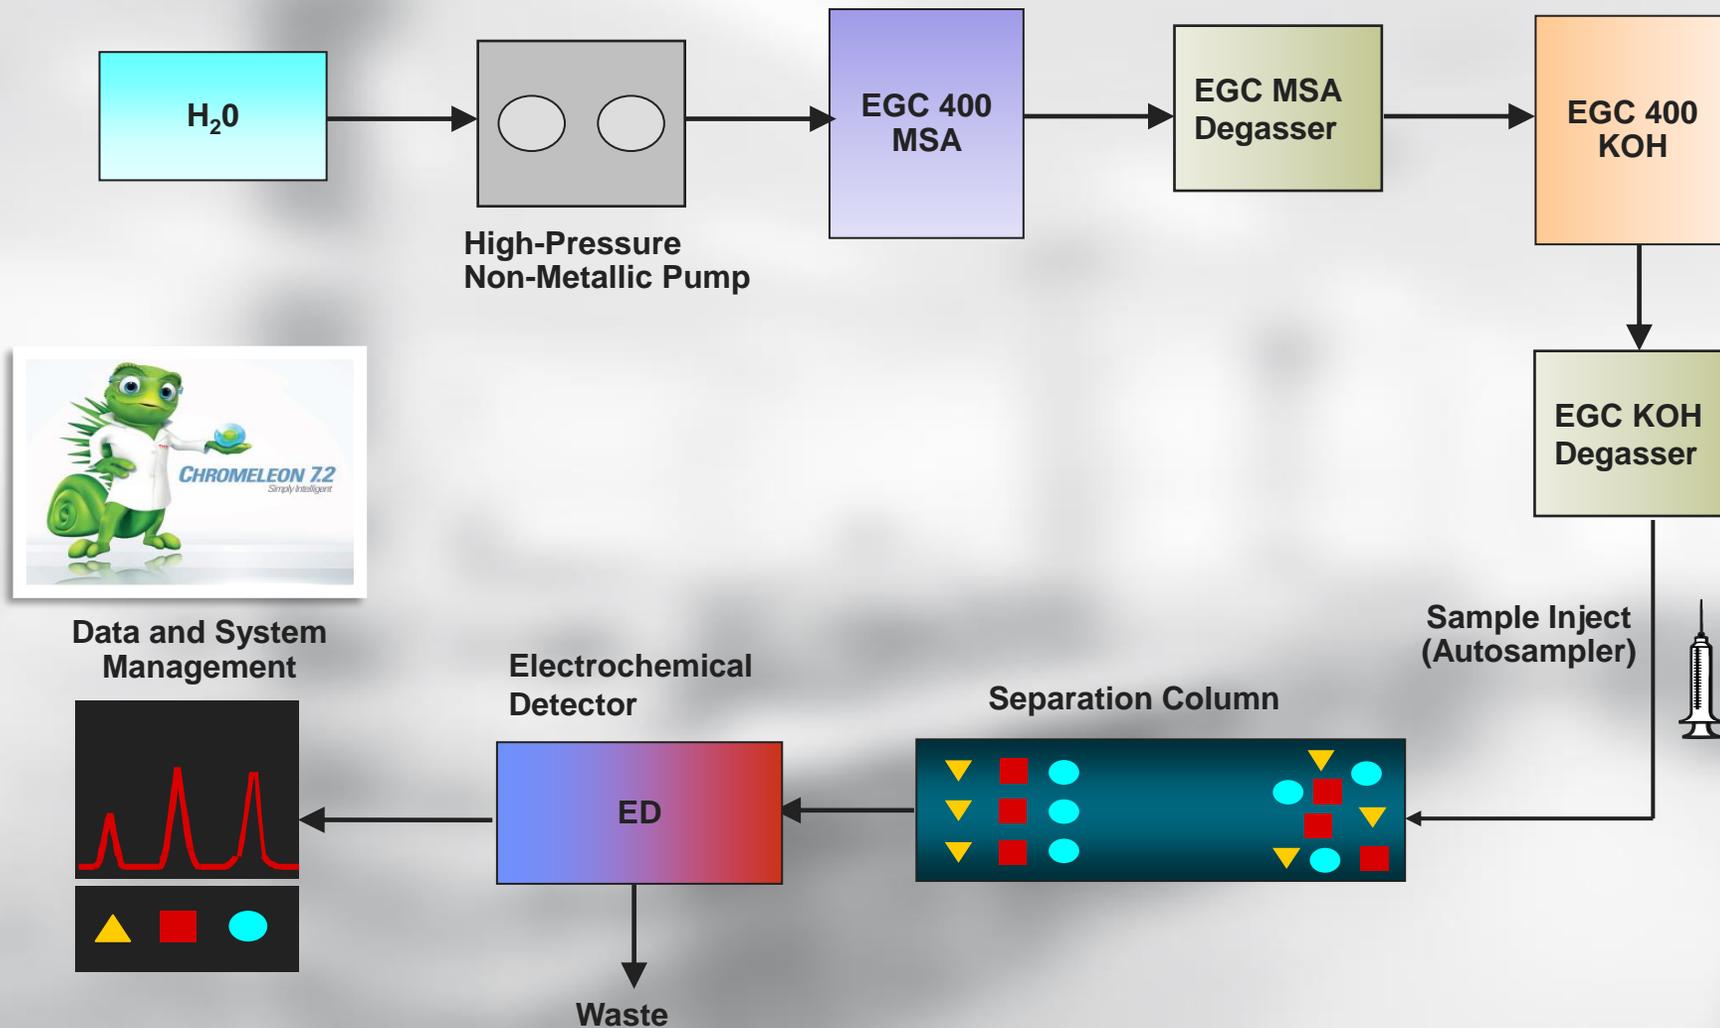

Separation + Guard columns

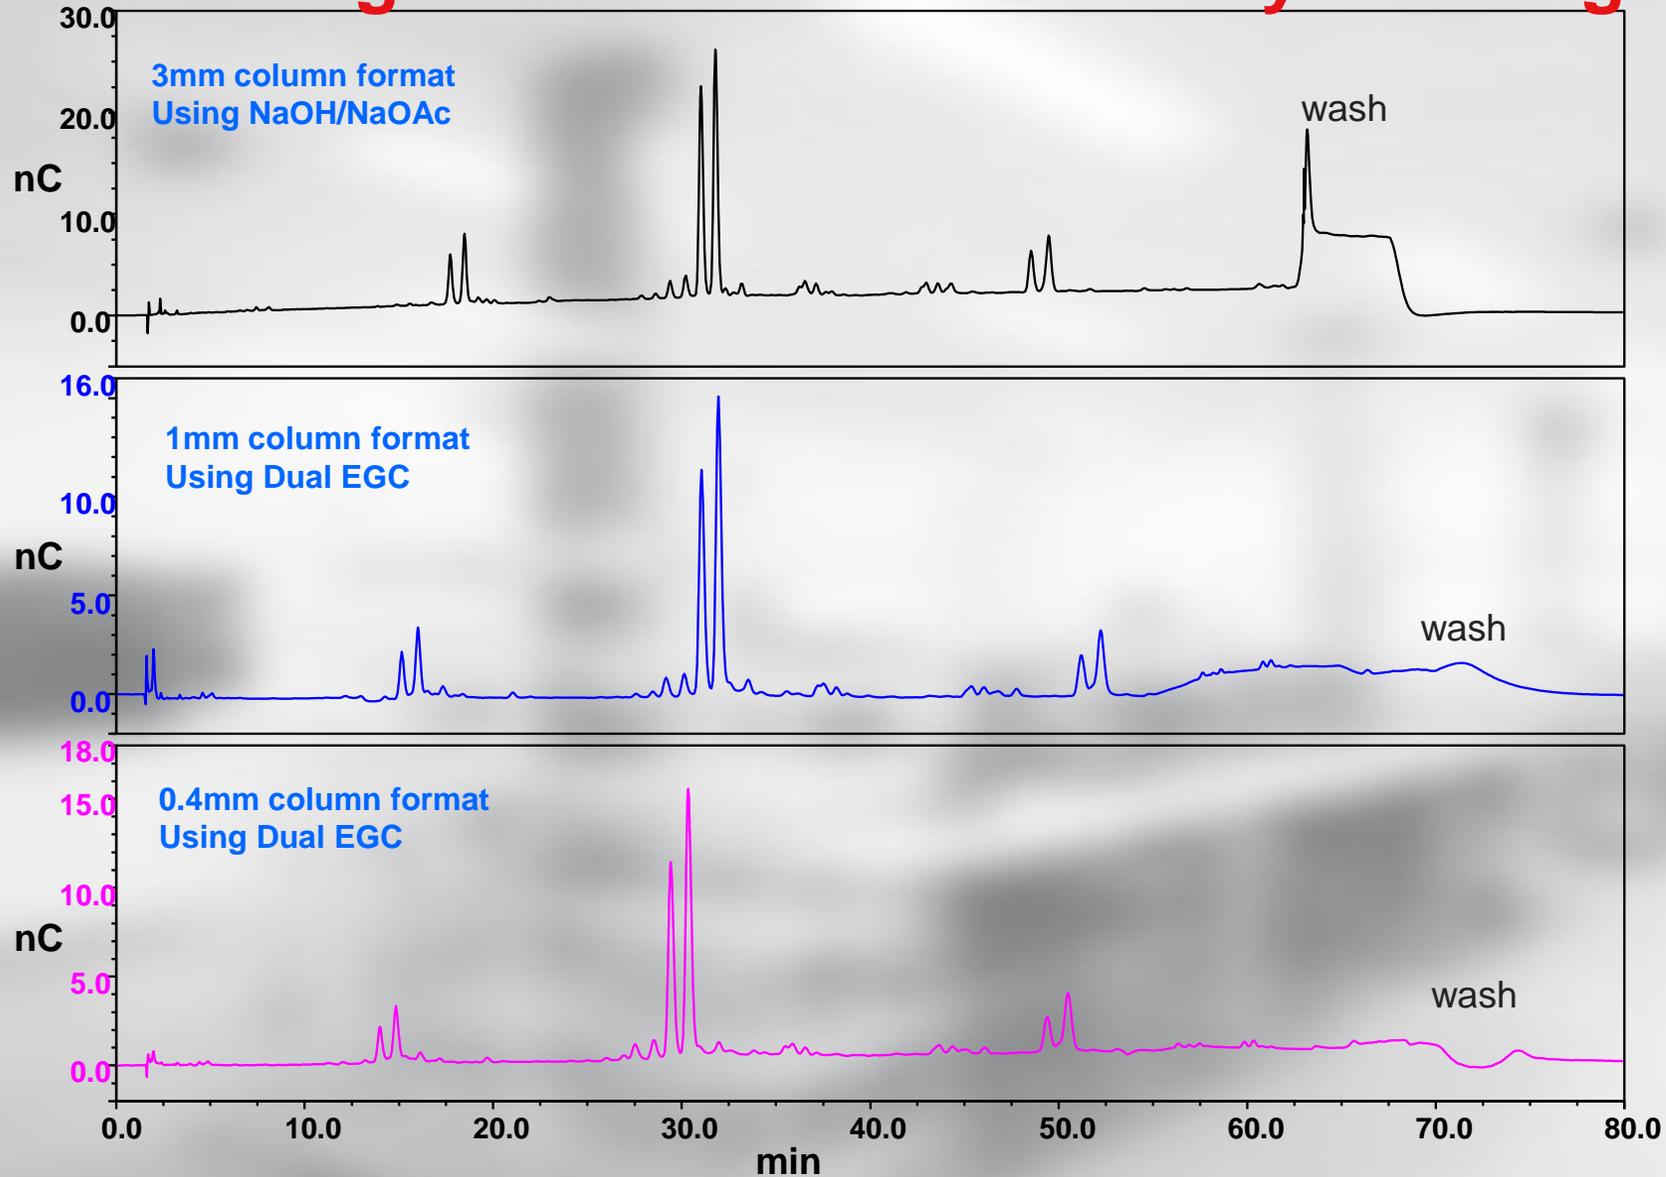

CM7 adjustments

- ✓ Leverages RFIC capabilities to electrolytically generate potassium hydroxide / potassium methanesulfonate (KOH/KMSA) eluents.
- ✓ Can replace manual NaOH/NaOAc gradients required for analyzing complex carbohydrates
- ✓ Will now allow our Cap IC systems to perform the complex carbohydrate analysis
- ✓ Available formats - capillary (0.4 mm) and analytical (1.0 mm)

# Speciation with IC-ICP-MS

- IC-ICP-MS is the ideal choice for trace elemental speciation because:

- **Dionex IC systems are entirely metal-free (PEEK)**
- Fully integrated systems with Chromeleon plug-in for Qtegra enables seamless control of both units
- Powerful separation chemistries with a wide selection of columns also for specialized applications
- Reagent-Free Ion Chromatography (RFIC) for ease of use

# The IC-ICP-MS Bundles

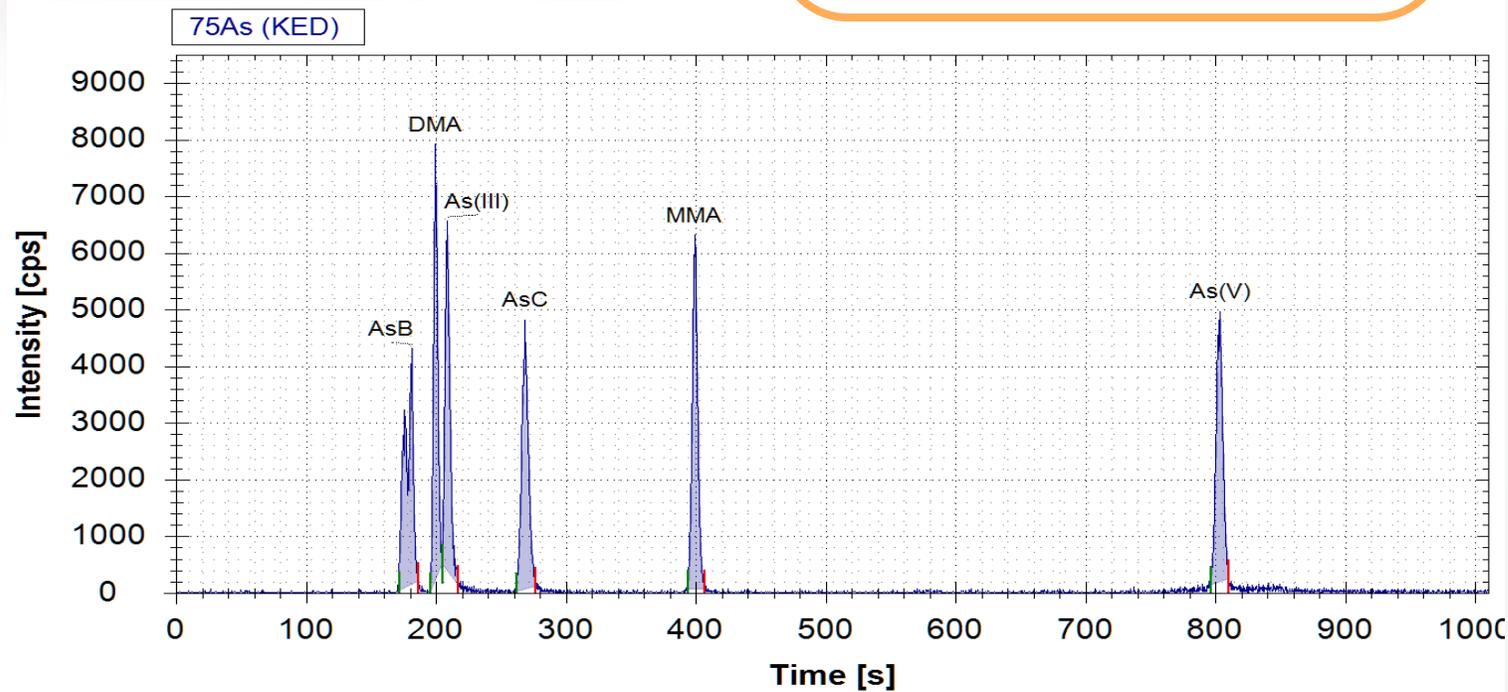

IC	Pump Channels	Autosampler	Column heater	RFIC	Elution possibilities	Applications
ICS-6000	Quaternary	AS-AP	✓	optional	Gradient - full flexibility	As, Br, Cr, Fe, Hg, I, Se, Sn

# As speciation by IC coupled to ICP-MS

Narrow peak width enables high signal to noise, resulting in lower LODs

Improved column chemistry provides better resolution even for closely eluting peaks

## BENEFITS

- Completely **metal-free** flow path
  - Less contamination
  - Lowest chemical noise
  - Better S/N
  - Lower LOD
- Narrower bore columns (2 mm ID)
  - Narrower peak shapes
  - Better S/N

***Metal-free flow path ideal for metal speciation applications***
