

EVOSEP WEBINAR

Single Cell Proteomics

WED NOV 16 2022 | 16:00 PM CET

Single cell proteomics is a field in rapid development, enabled by significant technological improvements over the last years and it presents a key contribution to answer fundamental biological questions about heterogeneity within complex systems.

The ProteoCHIP - Increasing the throughput for label-free single-cell proteomics sample preparation

Talk by Claudia Ctordecka, Postdoc at Broad Institute
