

Thermo Scientific™ Compound Discoverer™ Software virtual training workshops

Dear Orbitrap users,

We are pleased to invite you to our Autumn 2023 version of virtual activities to support our Compound Discoverer (CD) software users.

The workshops are designed to bring beginners up-to-speed with best practices as well as allow advanced users to interact with software experts and enquire how to get the most out of their data. Additionally, two dedicated sessions specialized in Metabolite/drug metabolite Identification (Met ID) and Gas Chromatography Mass Spectrometry (GCMS) data analysis will follow.

The content is delivered through online workshops, 2-3 hours each, via MS-Teams. The workshops feature live exercises on pre-distributed data, discussion of CD features, parameters, and optimized settings. The sessions are **hands-on** and **highly interactive**, so get the best experience by having CD 3.3 SP2 up and running. Click [HERE](#) to download a free 60-day trial version of the latest Compound Discoverer software release.

The sessions allow ample time for the participants to get their CD-related questions answered in real time. The workshops will be taught in English, but participants can use MS Team`s instant subtitles in their preferred language.

General Compound Discoverer software training:

Tuesday	26 th September	10.00-13.30 CEST (Berlin time)
Wednesday	27 th September	10.00-13.30 CEST (Berlin time)
Thursday	28 th September	10.00-13.30 CEST (Berlin time)

Specialized data processing:

Met ID:	Wednesday	4 th October	10.00-13.30 CEST (Berlin time)
GCMS:	Thursday	18 th October	10.00-13.30 CEST (Berlin time)
